

Business Computerization Services

Not everyone with the understanding of computer systems is able or qualified to also provide professional services to the Kibbutz and its industries. This is a unique and complex sector which requires professional knowledge and much experience. As part of our company, the Brit Pikuach Corporation is expert in the Kibbutz sector and on the Kibbutz industry's needs. We, at Genie, fully understand the changing reality of the Kibbutzim and the industries. We know where it is important to keep track and know how to coordinate for you essential solutions for the information systems.

With the help of a special model we have developed, we have the ability to characterize the exact solution for your information system, which suits the Kibbutz and its industries, without giving up on the speciality of the community or the business values of the industries. As you can see from the flowchart below, the model allows for an orderly and professional process.

During this past year we have undertaken many such processes in the Kibbutzim and in the Kibbutz industries and have been successful in maximizing efficiency and upgrading their systems, while saving substantial expenses.

We will be happy to arrange a meeting with you, without any commitments involved, in order to present our model and its advantages for you.
